Lt. Boyd H. Huff (Jan '44 to \_\_\_\_\_)

## GOCO PLANT DIRECTORY

(OHF thru 31 Dec. '43)

Cal. 30 buildings with a daily capacity of 600,000 and 2,000,000 respectively, with necessary auxiliary buildings. The third wave expansion during the later part of 1941 led to revision of requirements for the Utah Plant. Capacity was increased to 2,500,000 rounds of Cal. 30 and 800,000 rounds of Cal. 50 which necessitated construction of additions to the manufacturing buildings.

Cost: Total Cost as of 31 Dec. 1943- \$83,227,633.82

Special Factors: Since this was the first small arms ammunition manufacturing establishment to be placed in a stand-by condition, the adoption of many procedures was required with reference to leaving the machinery and other equipment in a preservative state to be used at a moment's notice if and when the situation required. It was estimated that the personnel to maintain the plant in standby would consist of approximately 100 employees including guards and other plant protection employees.

Production:

|                              |               |
|------------------------------|---------------|

| " A.P. Cal. 30 M-1           | 252,547,324   |
| " Tracer Cal. 30 M-1         | 131,628,878   |

GOCO PLANT DIRECTORY

(OHF thru 31 Dec. '43)

Name of Plant: Utah Ordnance Plant.

Location: Salt Lake City, Utah

Products: Caliber .30 armor piercing & tracer & Caliber .50 armor piercing, tracer and incendiary.

Operator: Remington Arms Co. of Bridgeport, Conn.

Contract: W-ORD-513, dated 30 July 1941 for management service (including subcontracts for architect-engineer services and construction of new ordnance facility and installation of equipment) procuring production equipment, training key personnel for and operating a new ordnance facility.

First Operation: Started in Jan. 1942. The first lot of ammunition consisting of 163,656 rounds of Cal. .30 M2 Ball completed 12 Feb. 1942.

Termination: As of 31 Dec. 1943 the facility was placed in "stand by condition"; if war necessities required it would resume operations.

Site and Facilities: This plant was constructed during the second wave of projects for munitions plants. The site consists of 4,996.5 acres within and adjacent to the southwest limits of Salt Lake City. The design called for one Cal. .50 and two
